Important: Please read these instructions

Please read all the instructions very carefully. It takes some time, but otherwise you will not know what to do and you will get a smaller bonus payment.

You will make a series of choices between buttons. Depending on which buttons you click you will win or lose points. Your goal is to win as many points as possible. You will receive a bonus payment based on the number of points you win. Each point is worth 1 cent. Here is an example of what you might see:

Select one:

BLICKET PRAVINE

Some buttons win points, and other lose points. However, each button's chance of winning will change randomly over the course of the game. A button may go from good to bad, and then back to good again, etc. Thus, you need to concentrate from start to finish.

Each round of the game involves a series of two choices. The first is the NUMBERS choice. You can either choose the "111111" button or the "2222222" button.

Next is the WORDS choice. Sometimes you choose between "Blicket" and "Pravine", other times you choose between "Brabor" and "Meslow".

One of the NUMBER buttons usually sends you to a choice between "Blicket" and "Pravine", while the other NUMBER button usually sends you to a choice between "Brabor" and "Meslow". So, depending on which WORD choice you want, you can influence things by choosing the appropriate NUMBER button. But the NUMBER buttons don't work perfectly. Usually they will send you to one WORD choice, but sometimes they will send you to the other one. Thus, the game involves both chance and skill.

Apart from the things we have already told you, there are no additional patterns or hidden tricks. For instance, the rewards do not alternate WIN-LOSE-WIN-LOSE, or anything like that. Also, the NUMBER choice does not make you win or lose points, it just helps you get to the WORD you want. The word that you chose is completely responsible for determining how much you win or lose.
